

Decreasing Loss

Anonymous posted Mar 4, 2019 11:15 AM [☆ Subscribe](#)

Is it okay if loss does not steadily decrease throughout the training of the cnn? When I plot loss vs. training time, the overall trend is decreasing, but the loss jumps around a bit. Is this normal or indicative of a problem with my cnn?

If you are doing mini-batch gradient descent, then it is normal to have some fluctuation in your loss.
