# Remove bad images?   ‹ ›

Anonymous posted Mar 7, 2019 8:22 AM   ☆ Subscribe

Upon exploring the wrongly classified images in my validation set I found that they are very bad like the one here. Will it make sense to remove wrongly classified images from the

either the train or validation set, then train again?

This looks like a tricky case, but there doesn't seem to be anything "wrong" with this image, as the seven is the largest digit. It is very tricky because the 1 in the bottom right is pretty much touching the seven. In any event, I would not recommend manually cleaning the data.

Best,

Will

Interesting. Honestly, I didn't know it was a 7 until I read the label!
